	rosin	k8s	<input checked="" type="checkbox"/>	12 hours	
	li-b2b	k8s	<input checked="" type="checkbox"/>	2 weeks	
	kube-cluster	k8s	<input checked="" type="checkbox"/>	4 weeks	
	fleet-policy	aws	<input checked="" type="checkbox"/>	29 feb 11:43:26	
	aws-vpc	aws	<input checked="" type="checkbox"/>	29 feb 11:43:26	
	aws-lambda-infrastructure	aws	<input checked="" type="checkbox"/>	29 feb 11:43:26	
	aws-lambda-app1	aws	<input checked="" type="checkbox"/>	29 feb 11:43:26	
	google-firebase-infrastructure	gcp	<input checked="" type="checkbox"/>	29 feb 11:43:26	
	google-voice-app	firebase	<input checked="" type="checkbox"/>	29 jan 13:45:26	

Should think about db migration dependency relationship. Might want to render that explicitly

Change configuration strings

AS400_HOST	<input type="text" value="istmvel02"/>
AS400_USERNAME	<input type="text" value="myas400user"/>
LOGIN_PAGE	<input type="text" value="https://externallogin.aws.tn.is"/>
LEIT_WEB	<input type="text" value="https://externalsearch.aws.tn.is"/>
STATIC_WEB	<input type="text" value="https://statics3.aws.tn.is"/>
BILABANKI_WEB	<input type="text" value="https://papi.test.tn.is/bilabanki"/>

I am not sure it makes sense to create a UI for this

## Downtime impact ( do we want this here? is there a better place?)

TM employees can not manage customer policies issued in Rosin  
TM employees can not issue new policies managed by Rosin

....

Readme.md (not sure this would be relevant. Perhaps if packager wants it? Package any documents and render here if packager chooses to?)

.....

Changes to Production from deployment #9 to deployment #10 @ 28 jun 2017 15:40:26

www\_icelandair\_com from version 1.1.100 to 1.1.110

Wed, 28 Jun 2017 10:17:29 +0000 by gulli. - Improve log output. Support absence of redshift in environment.

Tue, 27 Jun 2017 10:56:32 +0000 by gulli. - Merge remote-tracking branch 'origin/master'

Tue, 27 Jun 2017 10:56:17 +0000 by Andri Mar Björgvinsson. - Merge pull request #83 from Icelandair/next-gen-testing

Tue, 27 Jun 2017 10:54:36 +0000 by gulli. - One underscore please.

Tue, 27 Jun 2017 10:25:35 +0000 by gulli. - Remove redunant grep -v

business\_icelandair\_com from version 2.2.200 to 2.2.220

Wed, 28 Jun 2017 10:17:29 +0000 by gulli. - Improve log output. Support absence of redshift in environment.

Tue, 27 Jun 2017 10:56:32 +0000 by gulli. - Merge remote-tracking branch 'origin/master'

Tue, 27 Jun 2017 10:56:17 +0000 by Andri Mar Björgvinsson. - Merge pull request #83 from Icelandair/next-gen-testing

Tue, 27 Jun 2017 10:54:36 +0000 by gulli. - One underscore please.

Tue, 27 Jun 2017 10:25:35 +0000 by gulli. - Remove redunant grep -v

Changes to Production from deployment #8 to deployment #9 @ 26 jun 2017 12:40:26

www\_icelandair\_com from version 1.1.100 to 1.1.110

Wed, 28 Jun 2017 10:17:29 +0000 by gulli. - Improve log output. Support absence of redshift in environment.

Tue, 27 Jun 2017 10:56:32 +0000 by gulli. - Merge remote-tracking branch 'origin/master'

Tue, 27 Jun 2017 10:25:35 +0000 by gulli. - Remove redunant grep -v

business\_icelandair\_com from version 2.2.200 to 2.2.220

Need to think about revert is rendered

## Use cases:

- a. New developer orientation. Give him access to read up on all production deployments, platforms in use, methods and discipline in use (infrastructure as code, db migrations, microservices architecture, well factored services).
- b. New service creation. Refresh on services already in production, read up on their implementation, platforms used.
- c. Version rollback. Production version of something starts failing, lets roll it back.
- d. Lets see which version of my service is running in production (best view to see this, not they only one)
- e. Some deployments are more sensitive than others. Lets password protect them.
- f. I need to deploy to platform X. How the hell do I do that. A: Write scripts on the platform most native to X, which is usually some variant of Linux/Bash or Windows/PowerShell
- h. I would like to know how fast my deployments are relative to each other
- g. I would like to know who is using configuration option X (say, login page)
- i. I would like to change configuration without going through entire build and deployment pipeline.

## Future cases requiring more integration options and/or more design work

1. I am tracking what changed in relation to feature X. What changed in relation to that?
2. I would like to compose a new temporary environment with services F through Z with version Y of infrastructure B to investigate out why regression R happened.
3. I would like to deploy service X to azure now instead of aws (underlying deployer would have to support this. Might be easy with stuff like Serverless framework)
